

6.35mm (1/4") Jack Socket and Pillow Push

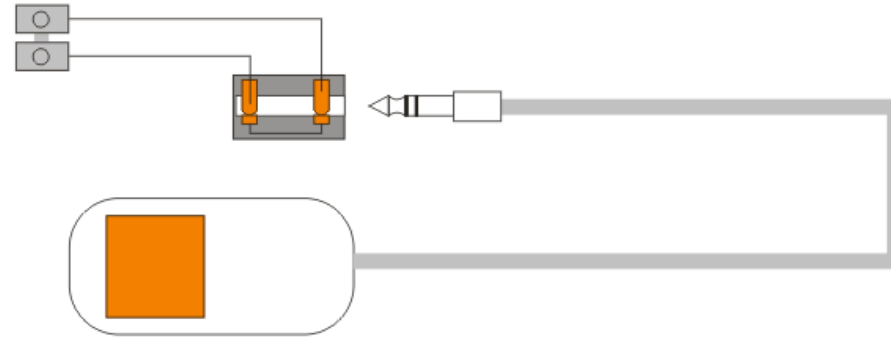

This instruction covers the following products:

S1732P Jack socket on a single gang plate

S1631 Pillow Push with Jack Plug

Jack socket is wired to present a closed circuit when the jack plug is removed. If this feature is not required cut the wire link.

The pillow push is an open circuit device - contacts close when pressed.

The S1732P is supplied labelled with words of your choice. Please contact us when ordering with the required wording.
